

T card system

TeeCards software is an electronic system that can be used in exactly the same way as a conventional T-card system. In its simplest form it comprises a panel, with slots into which you can pop a colored T-card.

TeeCards takes visual scheduling to the next level, allowing for multiple users and infinite projects. Copying T-cards into the future and several reporting options are just a few of the improvements over a standard T-card system.

Features and Benefits

- Suitable for any Windows (95 or later) or NT PC
- Create as many projects or boards as you wish
- Configure the system to get the best use for your organization
- Projects can feature up to 50 panels
- Panels can feature up to 100 slots
- Re-sort T-cards in any order in an instant
- Display T-cards dependent on date if required
- Display T-cards dependent on time, based on user-imposed intervals
- Assign T-cards individual colors
- Decide what fields are visible in the "T" when the card is in the "rack"
- Move T-cards between panels and quickly reassign them
- Memo field on each card can hold about 25 pages of text
- Allows for a number of predefined reports and a printed version of the board
- Find facility can quickly locate a T-card
- Replicate feature can reproduce the same T-card for a number of days or weeks
- Re-analyze T-cards in different ways by any attribute on the card
- Can comfortably handle about 1.5 million T-cards in one project
